Evidence-first portfolio | 05 November 2026

Purpose. This document shows real source-backed work samples: fresh test results, selected implementation code, and an anonymized operational CRM extract. It is intended to support—not replace—the résumé.

VERIFIED EVIDENCE AT A GLANCE

11 / 11
CanonLock test files passed
Latest connected test run

2 / 2
RepairRelay test files passed
Latest connected test run

505
CRM records marked unique
507 stored prospect rows; 2 duplicates

8 / 8
Quant accounting checks passed
Recorded research reconciliation

THREE CASE STUDIES

01 **CanonLock**
AI information consistency and MCP-oriented integration
Automated test discipline, validation logic, careful scope.

02 **RepairRelay**
Business validation and follow-up operations
CRM design, research records, status reporting, live prototype.

03 **AI Quant**
Data-focused Python research infrastructure
Market data quality, reproducibility, cautious decision gates.

Attribution: Founder-led projects with AI-assisted implementation. No claim of individual authorship of all code, salaried employment, commercial revenue, or trading profitability.

CASE STUDY 01 / AI INTEGRATION & TESTING

CanonLock: systems that preserve context

Founder-led product initiative: approved facts, contradiction checks, change controls, and a documented MCP integration path.

Relevant work: Defined product behavior, coordinated AI-assisted engineering, tracked test evidence, reviewed integration boundaries, and distinguished deterministic checks from unsupported semantic claims.

EVIDENCE A / FRESH AUTOMATED TEST OUTPUT

FLOOT TEST RUNNER / 05 NOV 2026

```
11 spec file(s) passed, 0 failed

PASS helpers/canonCore.spec.tsx
PASS helpers/rescueCore.spec.tsx
PASS helpers/canonAdversarial.spec.tsx
PASS helpers/canonCommitSafety.spec.tsx
... 7 more passing spec files (omitted for space)
typecheck: clean
```

Output transcribed from a fresh connected run; 2 hook spec files were excluded.

EVIDENCE B / SELECTED IMPLEMENTATION SOURCE

SOURCE EXTRACT / HELPERS/CANONCORE.TSX

```
const status = findings.length ? "CONFLICT" :
  !rules.length ? "OUT_OF_SCOPE" :
  unverified.length ? "UNCERTAIN" : "PASS";
return {status, findings, checked, unverified,
        checker: "canon-deterministic-v1"};

export function assertRevision(actual, expected) {
  if (actual !== expected)
    throw new Error("Stale canon version. Refresh and recheck.");
}
```

Formatted with line wraps and shortened type annotations; logic from connected source.

What this demonstrates: Clear status reporting (PASS / CONFLICT / UNCERTAIN / OUT_OF_SCOPE), rejection of stale revisions, structured acceptance criteria, and systematic regression testing.

Scope: Tests ran against the development project, not a production deployment. The repository is private; no customer data or secrets are included here. Live interface screenshots were unavailable without an open Floot editor.

CASE STUDY 02 / DIGITAL OPERATIONS

RepairRelay: research to action

Property-management maintenance workflow prototype with structured prospect research and follow-up coordination.

Relevant work: Managed the validation process, organized a multi-tab CRM, tracked prospect stage and suppression controls, prepared outreach, and maintained an honest record of conversations and next actions.

EVIDENCE A / CONNECTED CRM STRUCTURE

8
CRM tabs

30
Prospect fields

505
Records marked unique

2
Spec files passed

EVIDENCE B / ANONYMIZED EXTRACT OF ACTUAL CRM ROWS

PROSPECT ID	FIT CLASSIFICATION	WORKFLOW STAGE	HUMAN REPLY
RR-001	Unconfirmed	Routing update pending	No
RR-002	Unconfirmed	Auto-reply only	No
RR-003	Unconfirmed	No response	No
RR-004	Unconfirmed	No response	No
RR-005	Unconfirmed	No response	No

Privacy: Company names, email addresses, and personal details have been excluded. Statuses are drawn from the connected CRM as of 05 Nov 2026; this is a formatted data extract, not an app UI screenshot.

EVIDENCE C / EXECUTIVE-STYLE OPERATING BRIEF

Objective: Validate a maintenance coordination prototype through structured customer research.

Current readout: 507 prospect records, two marked duplicates, two human replies, and one positive pricing inquiry. No demo, pilot, or revenue is confirmed.

Next action: Review record quality and opt-out controls, handle genuine replies, and prepare a tailored demonstration when a relevant workflow is confirmed.

PUBLIC PRODUCT PROOF

Open published RepairRelay prototype

Floot currently reports this prototype as published. This is a live product link, not a claim of production customer deployment. Current project code also passed typecheck and 2 test files (0 failures).

CASE STUDY 03 / PYTHON, DATA INTEGRITY & RESEARCH

AI Quant: evidence before decisions

Research-focused quantitative system with repeatable data checks, simulation accounting, and controlled promotion gates.

Relevant work: Coordinated a Python research program covering market-data validation, research experiments, risk safeguards, reporting, and paper simulation. Research findings are not represented as profitable live trading results.

EVIDENCE A / REAL PYTHON SOURCE EXCERPT

SOURCE EXTRACT / QUANTBOT/DATA.PY

```
    if not out["timestamp"].diff().iloc[1:].eq(interval).all():
        raise ValueError("Missing candles or irregular timeframe; refusing to fabricate bars")
    if (out["timestamp"].astype("int64") % interval.value != 0).any():
        raise ValueError("Timestamps are not aligned to timeframe")
    current = pd.Timestamp.now(tz="UTC") if now is None else pd.Timestamp(now)
    if (out["timestamp"] + interval > current).any():
        raise ValueError("Future or incomplete candle")
    return out.reset_index(drop=True)
```

Exact contiguous source lines from validate_ohlcv; private GitHub repository.

EVIDENCE B / RECORDED ACCOUNTING RECONCILIATION

8 / 8
Checks passed
Research strategies

3,506
Bars inspected
Per strategy in report

0
Live orders
Research and paper only

The repository stores an independent cash, position, and fee reconciliation report. All eight listed strategies are marked PASS on internal accounting checks; this verifies ledger consistency, not market edge.

STRATEGY	FILLS / RESULT
Buy & hold	2 / PASS
Cash	0 / PASS
Hybrid	46 / PASS
Mean reversion	196 / PASS

STRATEGY	FILLS / RESULT
Machine learning	50 / PASS
Momentum	572 / PASS
SMA baseline	368 / PASS
Trend	464 / PASS

Additional data-quality evidence: The repository documents 8,928 five-minute candles from January 2022 aggregated into 15-minute, hourly, 4-hour and daily periods, with an independent source cross-check.

Scope: Private research repository; no public code release, verified live-order adapter, or demonstrated profitable strategy.
